WORK EXPERIENCE

FPT SOFTWARE

Intern Java Developer (9/2023 - 12/2023)

During my internship at FPT Software, I had the opportunity to learn extensively from experienced technologists, who provided me with valuable insights into professional software development processes and advanced technologies.

Throughout the internship, I gained hands-on experience with microservices architecture and its practical applications. Additionally, I studied and practiced implementing projects using Amazon Web Services (AWS). Furthermore, I expanded my knowledge in monitoring and observability tools by learning and working with Grafana and Prometheus, which helped me better understand system performance and reliability in modern development environments.

As a result of my efforts, I achieved an excellent score of 9.0 for my performance during the internship.

Team size 4

My position Member

My primary responsibility was to develop and implement backend APIs, to design and build efficient, scalable, and secure APIs

Technology

Using RESTful API with .NET, PostgreSQL as the database and implemented Redis for caching to improve performance and scalability.
